Tabular Editor

Agenda

1. The rise of agentic modeling
2. AI Assistant in Tabular Editor 3
3. The new Tabular Editor CLI
4. Comparing the options

The rise of agentic modeling

The World Has Changed

- AI models can now write code, use tools, and take actions – autonomously
- "Agents" aren't science fiction anymore: they're in your terminal today
- The question is no longer if AI will change how we build – it's how fast

Tabular Editor

What Does This Mean for Semantic Models?

- Semantic models are complex, expert-driven, and time-consuming to build and maintain
- But under the hood: they're metadata, DAX, and M – they're code
- LLMs are good at code. Agents can read, write, and modify it – with the right tools.

	AI-assisted	Agentic
Who drives?	You, with AI help	Agent, with your oversight
Best for	Interactive dev, Q&A, scripting	Bulk ops, automation, CI/CD
Risk level	Low – you approve each step	Medium – guardrails matter

Setting the stage

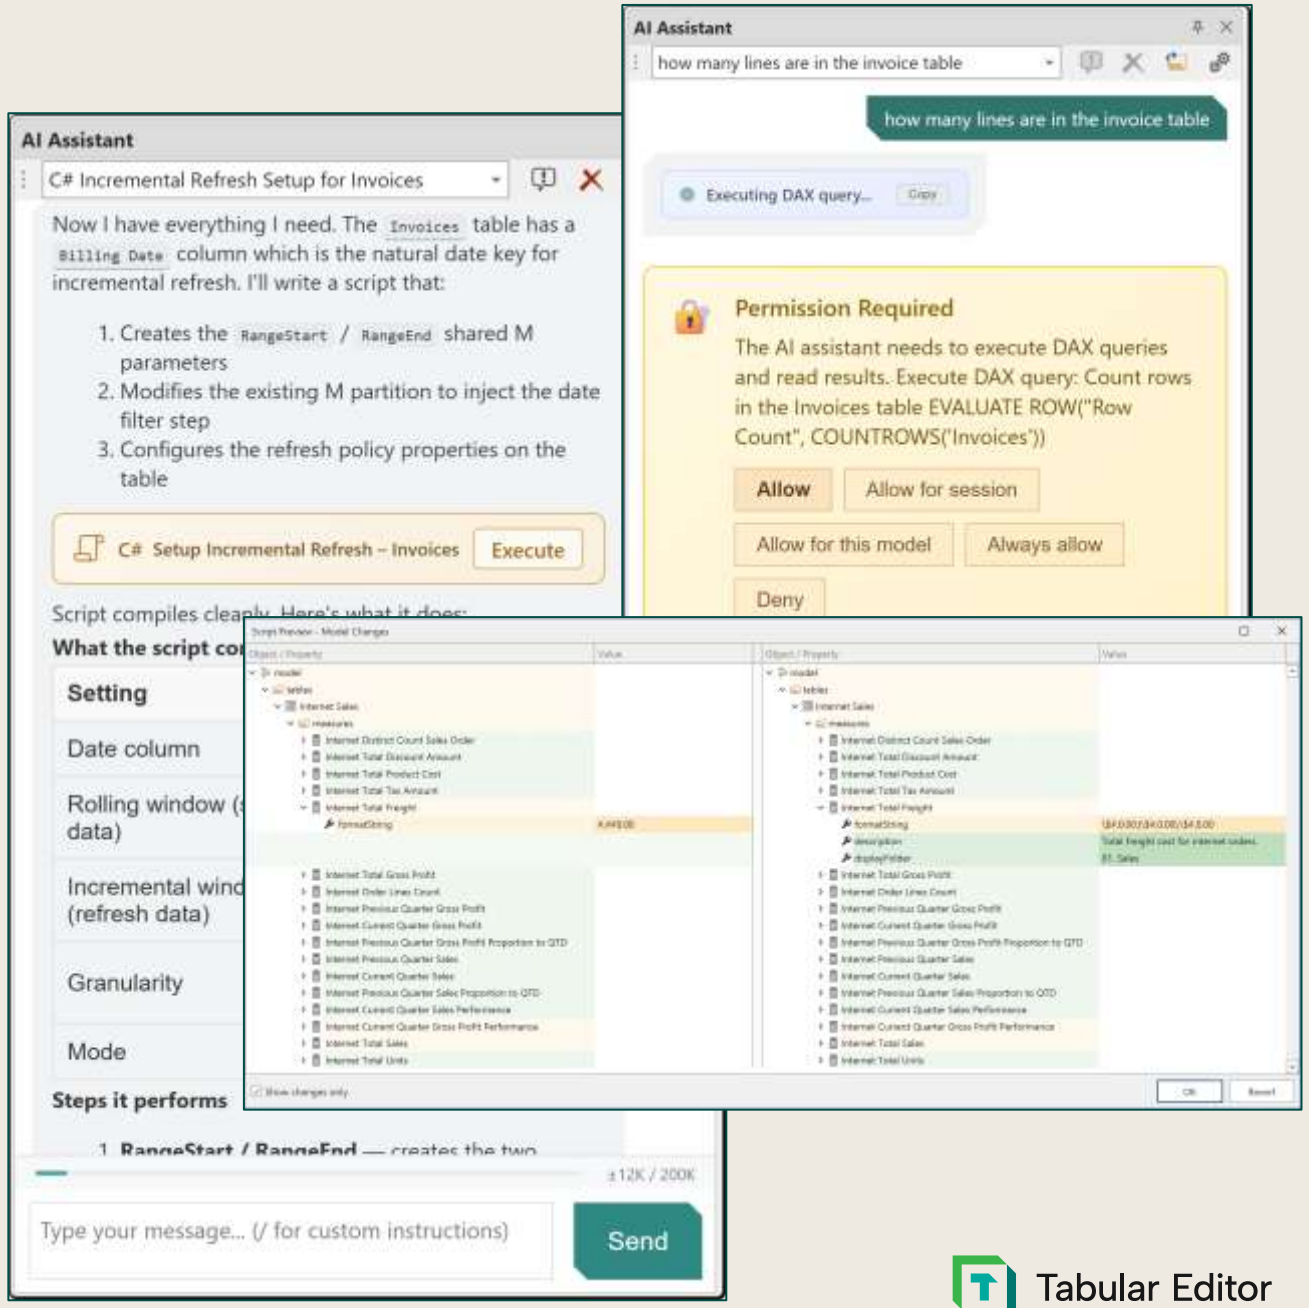

- Semantic models are code. LLMs are good at code. The hard part is giving them the right tools.

- **Two approaches, one goal: make agentic modeling work for real.**
  - **AI Assistant in TE3** – chat-based, inside the tool, you stay in control
  - **Tabular Editor CLI** – cross-platform, built for humans, agents, and CI/CD
  - Both powered by the TE3 features you already know: BPA, VertiPaq Analyzer, C# scripts

AI Assistant in TE3

What Is the AI Assistant?

- Chat UI built natively into Tabular Editor 3
- Bring your own LLM - OpenAI, Anthropic, Azure, local models
- Zero setup beyond an API key
- Scoped to Tabular Editor - not an MCP server or coding agent
- Human-in-the-loop: explicit permission control for every action

Tabular Editor

When to Use the AI Assistant

Use it when:

- You want AI help without leaving Tabular Editor
- You need compliance-friendly, local or org LLM support
- You want to stay in control with explicit approval steps

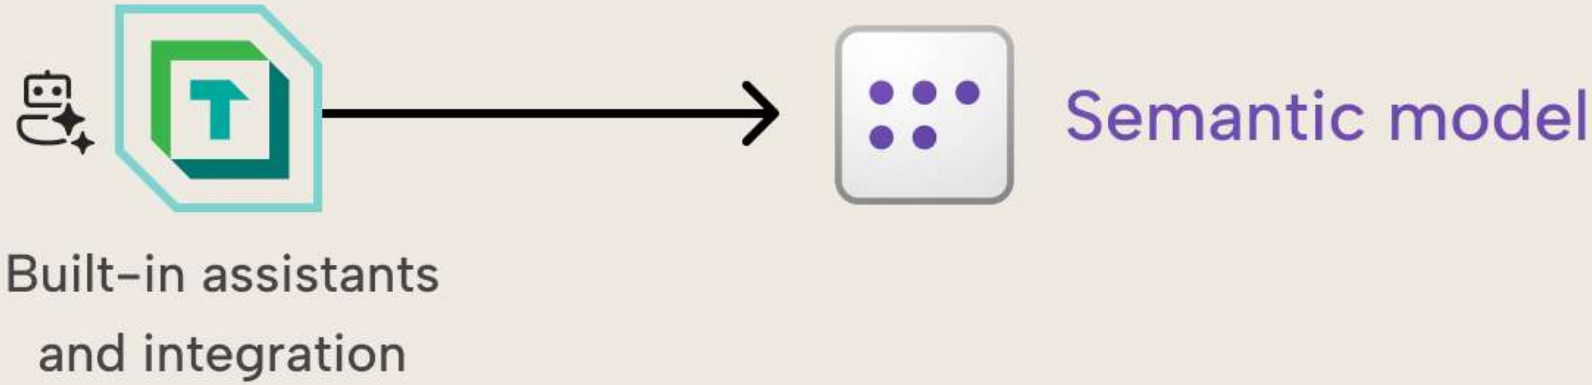

It's not for:

- Bulk, repeatable automation across pipelines
- Running heedlessly or without a GUI

The new Tabular Editor CLI

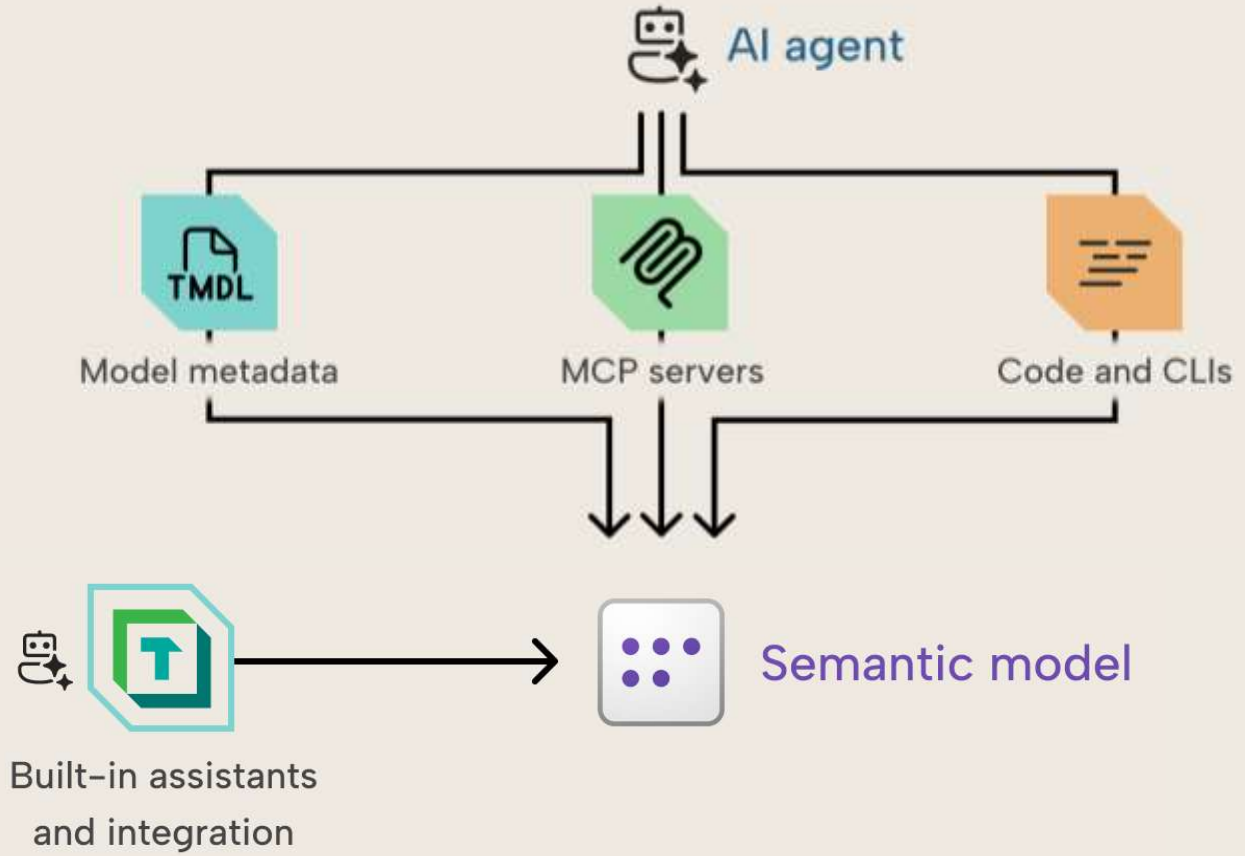

Public Preview

Tooling for agentic development

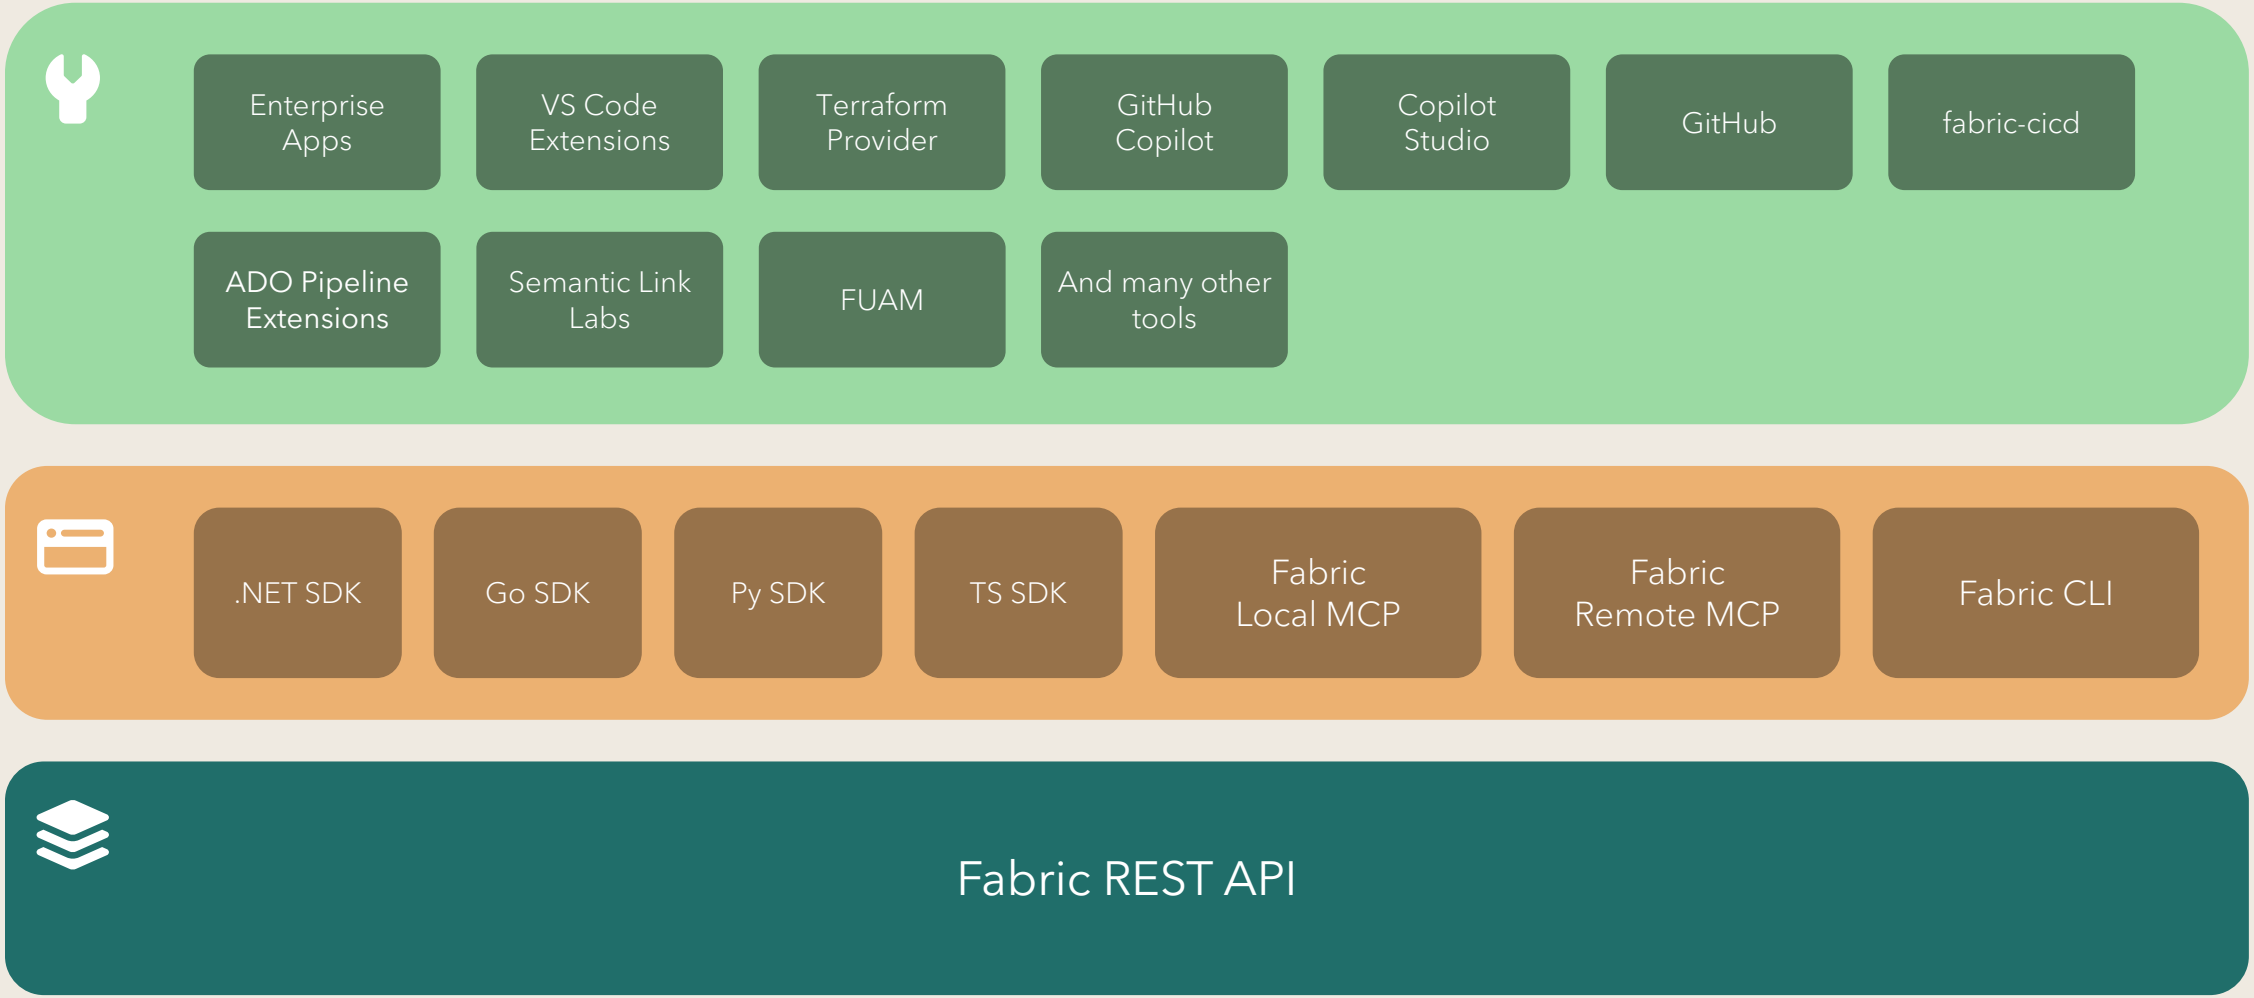

Tabular Editor

Tooling for agentic development

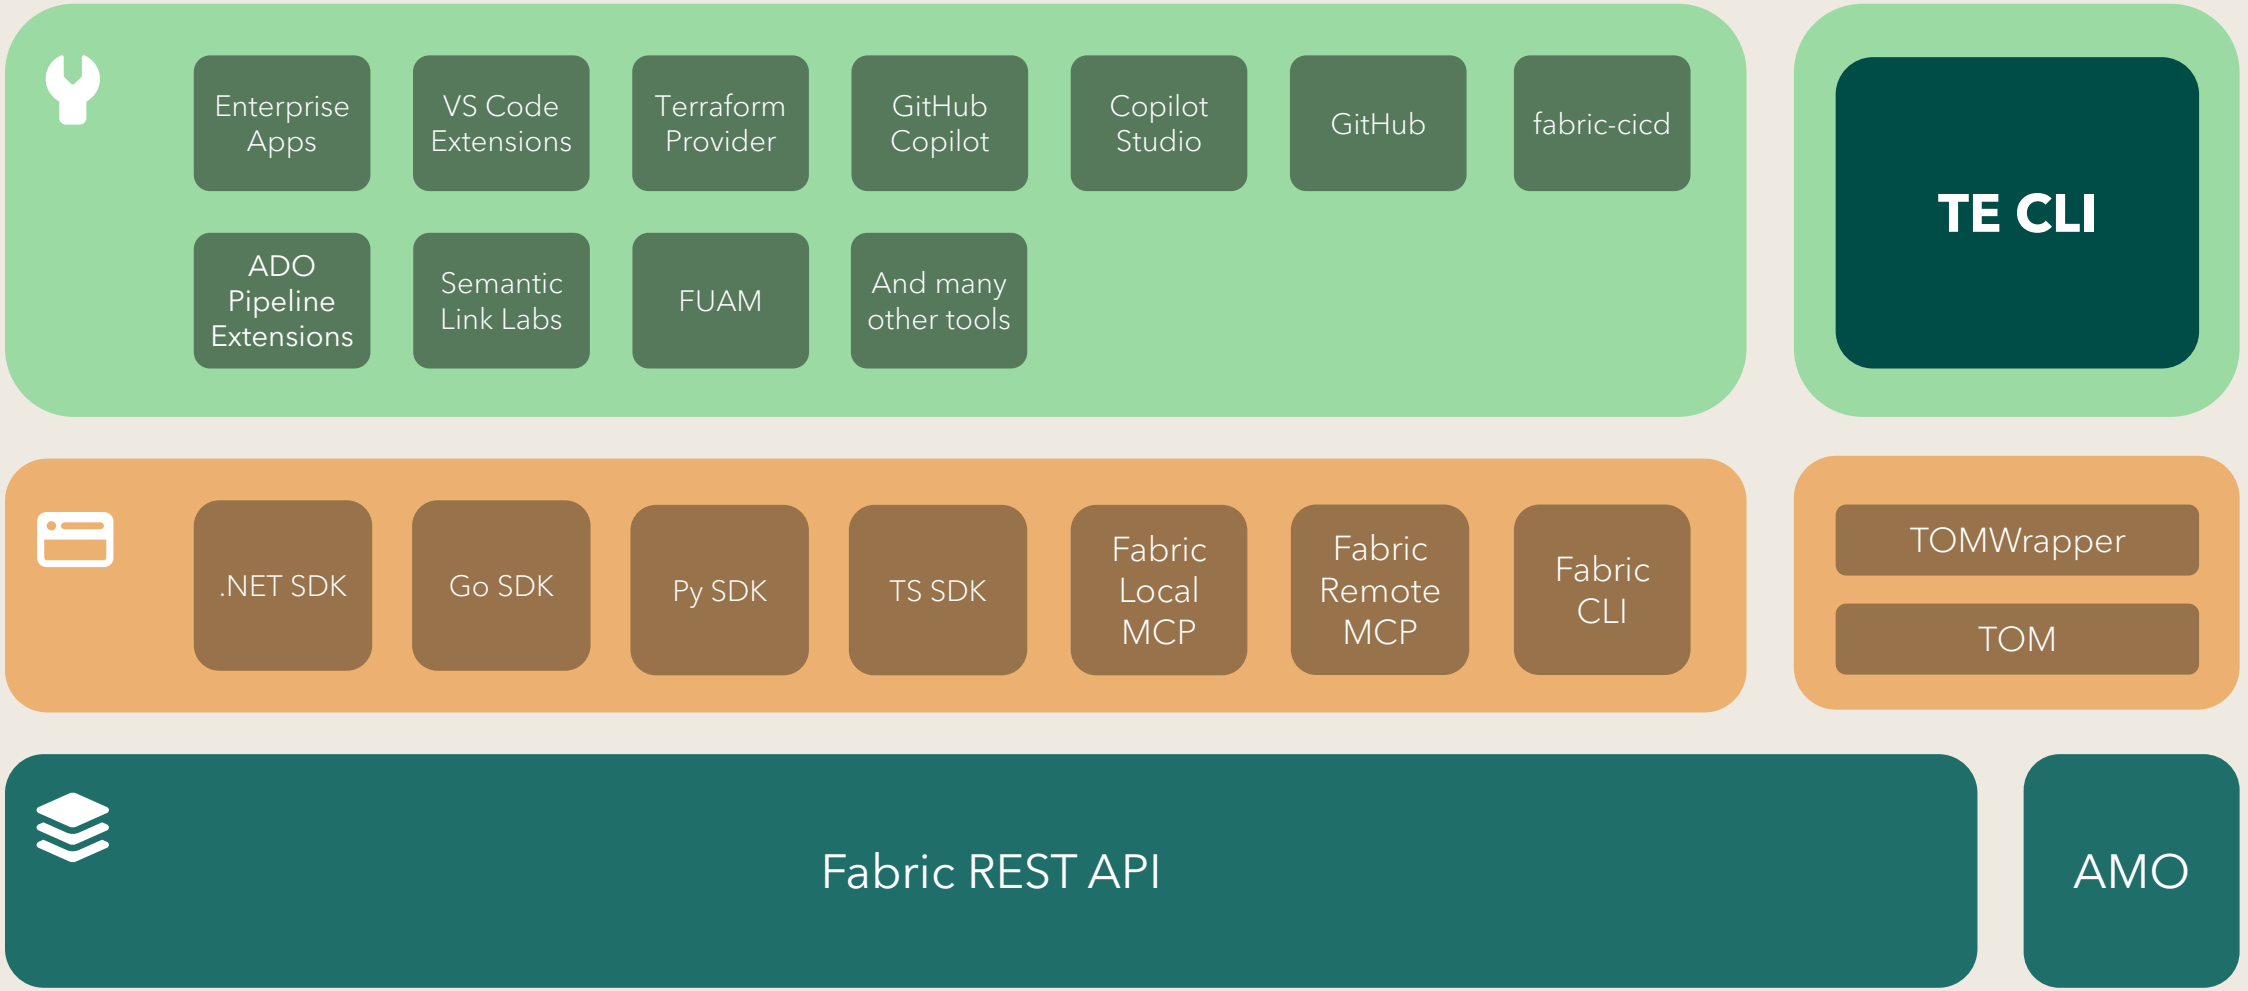

Tabular Editor

The Fabric Automation ecosystem

Tabular Editor

The Fabric Automation ecosystem – Soon to be!

Tabular Editor

The new Tabular Editor CLI (te)

1

Cross-platform & built for everyone

Windows, macOS, Linux – for humans, AI agents and CI/CD pipelines

2

Interactive REPL + non-interactive mode

Structured JSON output and clear errors for Agents

3

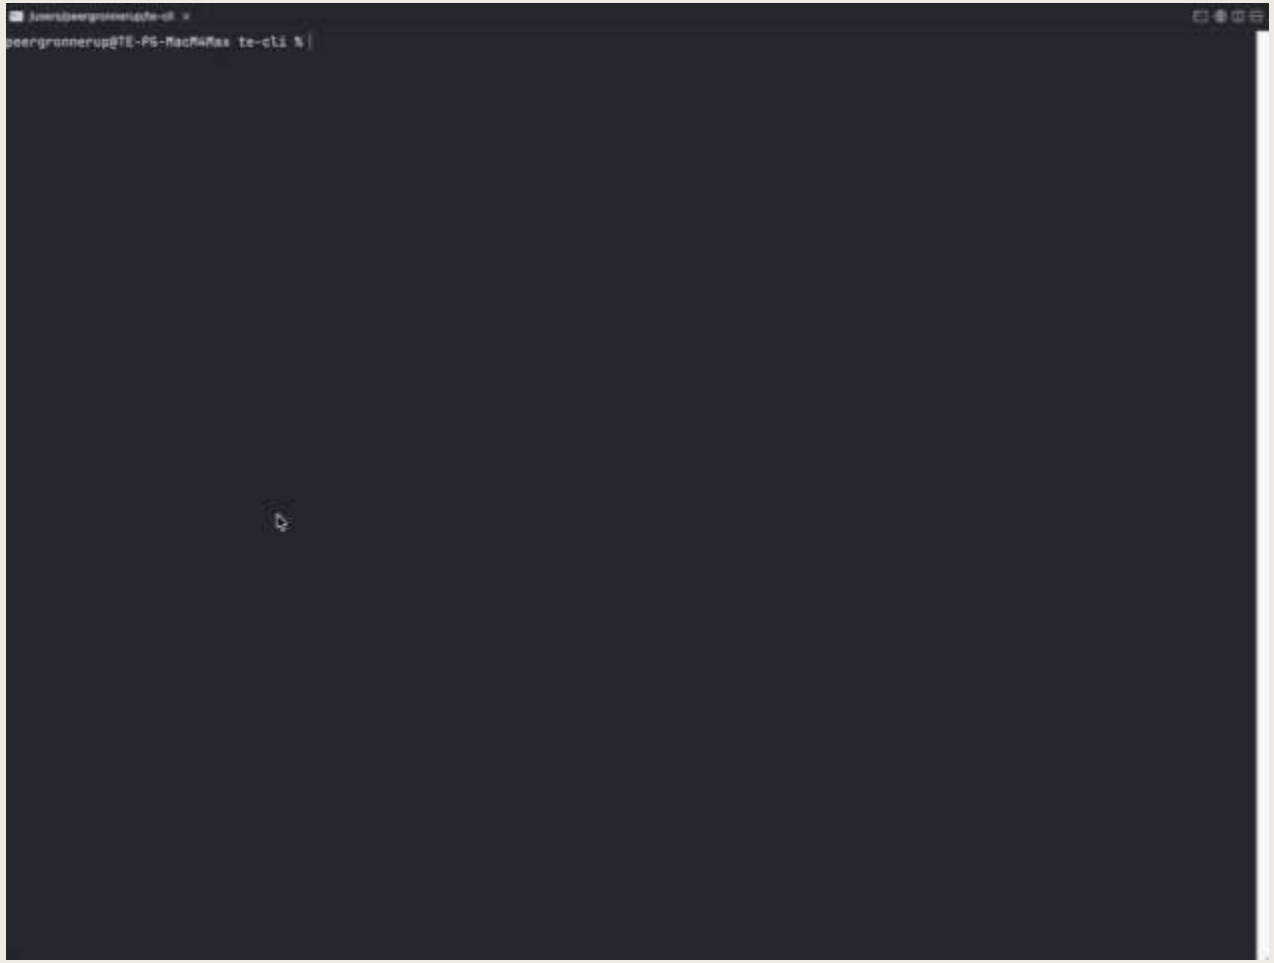

Evolution of the TE2 CLI

50+ commands across the full model lifecycle, backwards compatible

4

Inspect, edit, analyze, deploy & test

Vertipaq stats, BPA, DAX queries, refresh and test suites

Tabular Editor

Demo time!

Human

Interactive mode for power users

- Model exploration
- Model editing
- BPA analysis and auto-fix
- Vertipaq stats and tests

AI Agent

Token-lean modeling tasks

- Auto-generate models
- Auto-write table and column props
- Create translations across the model
- Skills that drive the CLI end-to-end

Not in today's demo

CI/CD

Automated, unattended pipelines

- Validate models on every commit
- Run BPA gates and test suites
- Deployment
- Trigger and verify model refreshes

Comparing the options – basics

Capability	AI + TMDL files	PBI Modeling MCP	TE3 AI Assistant	AI + TE CLI
Read model metadata	**Yes**	**Yes**	**Yes**	**Yes**
Edit model metadata	Partial	**Yes**	**Via C# scripts**	**Yes**
Query models (DAX)	No	**Yes**	**Yes**	**Yes**
Refresh models	No	**Yes**	No	**Yes**
Create new model	Partial	**Yes**	Partial	**Yes**
Deploy model	No	**Yes**	No	**Yes**
Scriptable / automatable	**Yes**	Partial	No	**Yes**
Format code (DAX, M)	Partial	Partial	**Via C# scripts**	**Yes**

Comparing the options – advanced

Capability	AI + TMDL files	PBI Modeling MCP	TE3 AI Assistant	AI + TE CLI
Configure incremental refresh	Partial	No	**Via C# scripts**	**Yes**
Trace queries (FE/SE)	No	**Yes**	No	**Yes**
Query plans	No	No	No	**Yes**
Edit/Run BPA	No	Partial	**Yes**	**Yes**
Test authoring and execution	No	No	No	**Yes**
Semantic analysis and dependency tracing	No	Partial	Partial	**Yes**
Model diff	Partial	No	Partial	**Yes**
Create / Run macros	No	No	Partial	**Yes**
